

Just Add Aluminium Foil - to make your Grounding Pad for your Shieldite

Enclosed are 2 grounding cables to make a ground pad for your shieldite. Your larger pieces of Shieldite can be grounded all the time for maximum performance. Use your grounding pad for your pendants, cell phone buttons and smaller pieces of Shieldite. You will need to add your own aluminium foil to make the grounding pad.

- fold some aluminium to the size you want. For the pyramids & cubes make it same size as the base so your Shieldite can sit on top.

- pull the 2 wires apart so you have 2 separate wires for 2 separate grounding pads.

- the banana plug fits into the plug in socket. If the socket has been used a lot the grip inside the socket may be a bit weakened so the banana plug will feel loose. You may tape it in or find another plug in that has a better gripping mechanism.

- the other end contains the alligator grip. Press the wide part to open the alligator teeth. Clip this to the aluminium foil.
- place the Shieldite on top of the aluminum foil.
